

Advanced

Communications and Electronics, Inc.

Statement of Qualifications

Introduction

Advanced Communications and Electronics, Inc.,
a full service communications provider offering
service, maintenance, consultation and sales.

Formed in 1994 as a customized two-way radio service center specializing in high mountain-top sites, state and local government radio communications system repairs and business radio systems. As the demand for our services grew, so did our organization and the need for another office in Southern New Mexico.

We represent high quality manufacturers of two-way radio communication systems, public safety vehicle packages, satellite telephone services, vehicle tracking, digital telephone systems, wireless in building networks, leased telephone line replacement, microwave technology and many others.

Our team members are in a constant training mode in order to stay ahead of technology. We are certified in every product offering and have wealth of knowledge in legacy systems as well.

Resources

Field Service Technicians

Teams of Field Service Technicians that work independently with little or no supervision. They possess superb customer service skills and an ability to diagnose and solve problems from non-technical descriptions provided by customers.

Bench Service Technicians

Bench Technicians who are responsible for diagnosing and repairing both hardware and software malfunctions, as well as maintenance of electronic communications equipment.

Mobile Communication Equipment Installer

Installers are responsible for the installation of a variety of mobile radio communications equipment in various types of motor vehicles. Installers also diagnose minor communication system problems, and make repairs or replacement malfunctioning equipment.

Pre-Sales Engineers

Team of Pre-sales Engineers to develop technical pre-sales solutions. They coordinate with our sales team in formulating and building up proposal knowledge. They conduct professional demos and presentations for clients, and analyze existing systems and recommend solutions. FCC Licensing

Site Infrastructure Installers

Site Infrastructure Installers are responsible for installation of communications equipment to include grounding, pre-wiring, construction, low voltage installation, etc. They possess a keen attention to detail and must understand the overall system architecture.

Technical Project Managers

Technical Project Managers work with the customer to plan, execute, and finalize projects according to deadlines and within budget. This includes acquiring resources and coordinating the efforts of team members and third party contractors in order to deliver projects according to plan. Project managers will also define the projects objectives and oversee quality control throughout its life cycle.

Site Management

Manage tenants on tower space, conduct tower loading analysis, monitor site activity and provide feedback to site owner.

Ongoing Service Maintenance

Service, maintain and update all communications equipment operational to current FCC standards.

FCC Licensing

Prepare FCC applications, modify, keep current and validate all FCC Licenses for our clients.

Credentials

Certified Service Center of New Mexico

The Certified Service Center (CSC) program is designed as a tool to help consumers find quality service centers, to help electronics manufacturers select service centers for warranty repairs, and to provide a standard for professional service firms that desire to offer outstanding customer service.

Factory Trained and Certified Specialists

R56 Certified

ETA Certified Technicians

Capabilities

E911 PSAP equipment installation and maintenance

Simulcast radio

P25 radio systems installation and maintenance

Dispatch center electronics

- Radio consoles
- Logging recorder
- RoIP IP based console
- POTS / IP telephone
- CAD / RMS systems installation and maintenance

SCADA

In building coverage enhancement

- BDA - bi-directional amplifiers
- Coverage testing and software based predictions

Wireless outdoor and indoor broadband systems design, install and maintenance

Microwave point to point systems design, installation and maintenance

Closed circuit television

Access control systems

DAS systems implementation

Radio Site Monitoring

Preventative Maintenance / Service Contracts

- Service and Repair/24*365 Maintenance Contracts

Coverage testing for outdoor and indoor networks

Antenna and line sweep testing

R56 site audits and site upgrades

Vehicular equipment

- Two way radios
- Laptops and MDT (mobile data terminals)
- Vehicular printers
- GPS vehicle tracking and reporting
- Sirens / light bars
- Broadband / wireless modems
- Stealth / disguise installations and antennas

Bench repairs

- Mobile fixed and portable radio equipment

Structured wiring

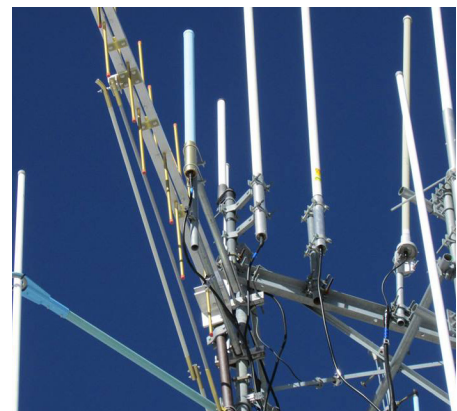

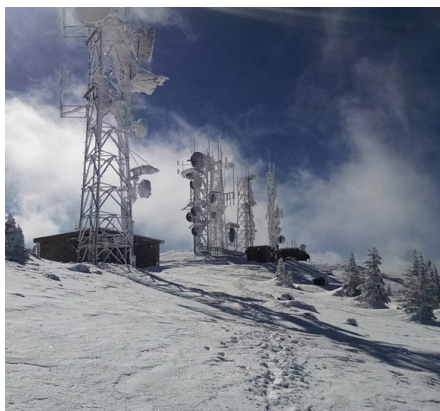

- CAT5e / CAT6 LAN
- DAS (distributed antenna systems)
- Video (coax or IP)

FCC license service

Fire station alerting systems

Outdoor emergency call boxes (radio, phone line or IP capable)

Outdoor / large area warning siren systems for campuses or production facilities

Recent Projects

Countywide Wireless Broadband Solution

One of the largest counties in New Mexico had the need to connect multiple communication sites with high speed wireless broadband. They had worked with Advanced Communications and Electronics in the past and had confidence that they would receive a solution that would fit their budget, be installed within their timeframe and be reliable. Advanced Communications supplied them with engineering, design, site studies, coverage maps, FCC Licensing, project management, installation and system warranty. We worked closely with our sister company, Advanced Tower Services, Inc. for the construction of multiple towers. This system has allowed the County to offer high throughout internet connections to schools, healthcare offices and various municipal offices located throughout the County. The County's IT Director is able to control bandwidth speed and access to end users.

Multiple Agency Dispatch Center CAD and Records Management Software

In southeastern New Mexico, several cities were communicating independantly and dispatching themselves and didn't have a conjoined system that would allow all of the agencies to communicate with each other and share vital information. Moving the main dispatch center from one city to another almost 40 miles away was made easier with the software provided by Advanced Communications. Multiple users are now able to access the system at once proving real-time data access as well as the most accurate information available to public safety **officers in the field.** In addition to providing a single point of access for the agencies to access their records, we were also able to increase the safety of their citizens by keeping this data current and proving links into the State of New Mexico's databases.

Digital Radio System

An electrical coop had the need to narrowband their two-way radio system to meet the federal mandate. Upon meeting with Advanced Communications and Electronics, Inc. it was determined that due to the age of many components in their system, the cost of narrowbanding was almost equal to the cost of a new digital radio system. Advanced Communications designed a system to operate throughout the hundreds of square miles that the coop operates. The coop has the capability to coomunicate throughout their area of operation from a single dispatch point. The radios are capable of many upgrades such as GPS, work ticket dispatch as well as text messaging.

About Us

Advanced Communications and electronics, Inc. was formed in 1994. Our team of highly trained technicians deliver unrivaled solutions and offer an exceptional past performance record. We design state of the art infrastructure for reliable communications networks; land mobile radio, Radio over IP (RoIP), satellite. You can rely on us to provide the most basic portable radio up to the most complex radio structure. Because training and education are the pillars of our business, our employees are ready to offer the highest quality of service. For more information contact us.
